

DO YOU NEED A SECOND COVID-19 BOOSTER SHOT?

Vaccine booster combinations to improve long term COVID-19 protective immunity.

- ⦿ This study aims to investigate the extent to which a fourth dose of a COVID-19 vaccine boosts protective immunity.
- ⦿ We also want to know who is most likely to benefit, when this booster dose should be administered, and if this booster vaccine will improve protection against the new variant viruses.

Participation Involves:

- ⦿ One dose of a COVID-19 vaccine
- ⦿ Medical screening
- ⦿ Blood tests to monitor COVID-19 immunity
- ⦿ Up to 6 visits over one year

You May Qualify If You Are:

- ⦿ Aged ≥ 21 years
- ⦿ Received the first booster dose of mRNA vaccine (Pfizer or Moderna) at least 5 months ago
- ⦿ Recommended to receive a second booster under MOH guidelines
